

Environmental- and Climate policy

(English version)

Our environmental and climate work shall, through continuous improvement, reduce the impact as far as it is ecologically justified, technically possible and economically reasonable. We must work for a long-term sustainable development of our business and continuously set, and follow up, goals for this.

- We must fulfill the requirements imposed on us by laws, regulations and rules.
- We must work actively to reduce our footprint according to the GHG protocol.
- We must economize on raw materials, materials, water and other inputs.
- We must design work methods, processes and transport with consideration for the environment and thereby prevent waste, pollution and noise.
- We must monitor climate risks and prevent environmental accidents and maintain a high level of preparedness for these.
- We must take into account how our supplier and contractors deals with environmental issues and how they work with climate impact.
- We shall develop a personal responsibility among employees through training, information and active participation in environmental and climate work.
